PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 5; Page 38; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence is a murine derived CDR region which corresponds
CC to CDR 1 in the heavy chain of the humanised MAb. See AAR97313-97333

PT Identifying binding molecules for ligands, particularly tumour antigens -
PT by selectively immobilising a population of binding molecules to a solid
PT support and screening for binding to two or more ligands.
XX
PS Claim 15; Page 60; 80pp; English.
XX
CC This sequence represents a heavy chain complementarity determining region
CC (CDR) from a tumour antigen specific antibody. The invention relates to a
CC method for identifying a binding molecule having selective affinity for a
CC ligand comprising: (a) selectively immobilising a diverse population of
CC binding molecules to a solid support; (b) simultaneously contacting the
CC diverse population immobilised on the solid support with 2 or more
CC ligands; and (c) determining at least one binding molecule which
CC selectively binds to one or more of the ligands. The method allows for
CC the rapid and efficient methods for the identification of binding
CC molecules which exhibit selective affinity for one or more ligands of
CC interest. They are used particularly for identifying tumour-specific
CC binding polypeptides which can be used as targeting agents for cancer
CC therapy that minimises impact on non-tumour tissues

PT Identifying binding molecules having selective affinity for ligands for
PT discovering reagents for treating diseases, by contacting solid support
PT coated with anti-immunoglobulin reagent to a phage expressed antibody
PT library.
XX
PS Example 5; Page 16; 26pp; English.
XX
CC The present invention relates to a method for identifying a binding
CC molecule having selective affinity for a ligand. The method involves
CC providing a solid support coated with an anti-immunoglobulin reagent, and
CC a phage expressed antibody library, and contacting the solid support to
CC the phage expressed antibody library. The invention also discloses a
CC method for identifying an antibody having selective affinity for a
CC tumour, and a complementarity determining region (CDR) of an antibody
CC selective for a tumour antigen. The methods of the invention are useful
CC for identifying a binding molecule having selective affinity for a
CC ligand, for the discovery of specific reagents for diagnosis and
CC treatment of human diseases, for identifying binding molecules to, for
CC example tumour cells or other cellular pathologies for the selective
CC targeting of therapeutic agents, or for the identification of binding
CC molecules to normal or diseased tissues for the selective targeting of,
CC for example diagnostic agents such as imaging reagents. The methods are
CC rapid and efficient for the identification of binding molecules which
CC exhibit selective affinity for one or more ligands of interest. The
CC methods allow the simultaneous screening of multiple binding molecules
CC against multiple ligands of interest. Moreover, very little information
CC is required regarding the identity or function of either the binding
CC molecule or the ligand. For example diverse populations of binding
CC molecules can be simultaneously screened against diverse populations of
CC ligands to rapidly identify numerous molecules exhibiting a desired
CC binding specificity. The methods provide improved sensitivity and
CC specificity of detection through the selective immobilisation of the
CC binding molecule population on a solid support. The present sequence
CC represents a CDR region in the heavy chain of human Fab fragment.

PT   Treating non-medullary or medullary thyroid carcinoma, involves
PT   administering to subject, either concurrently or sequentially, anti-
PT   carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS   Claim 8; Page 76; 122pp; English.
XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This peptide sequence is a CDR region of
CC   the humanised murine MN-14 antibody of the invention.

XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This polypeptide sequence is the humanised
CC   murine MN-14 antibody heavy chain variable region protein of the
CC   invention.

PT   Treating non-medullary or medullary thyroid carcinoma, involves
PT   administering to subject, either concurrently or sequentially, anti-
PT   carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS   Disclosure; Fig 11; 122pp; English.
XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This polypeptide sequence is murine MN-14
CC   antibody heavy chain variable region protein of the invention.

PT   New chimeric molecule from humanized antibody against carcinoembryonic
PT   antigen and having signaling molecules of T cells and other effector
PT   cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS   Disclosure; Page 9; 20pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the
CC   carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC   as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC   chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC   which the cysteine residues have been mutated, with the IgTCR molecule
CC   occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC   appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC   NK (not defined) or other effector cells are useful in treating patients
CC   with cancers expressing the CEA antigen, together with other or with
CC   heterologous constructs to engage additional stimulatory and functional
CC   properties of the effector cells to enhance the anti-tumour therapeutic
CC   efficacy. The cancer disorder includes colorectal, breast and lung
CC   cancers. The present sequence represents the heavy chain variable, VH,
CC   region of antibody hMN14. The VH protein is humanised (complementarity
CC   determining region-grafted) and has a leader peptide

XX
CC The present sequence is the protein sequence of hMN-14-0, which is
CC designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC Vkappa without a peptide linker. The use of the zero linker enables the
CC secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC The polypeptide also includes a pelB signal peptide, which precedes the
CC VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC purification. This monospecific triabody is an example of claimed
CC multivalent binding proteins specific for a tumour-associated antigen.
CC The binding proteins are used in the diagnosis and treatment of a tumour,
CC carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC acute myelogenous leukaemia, biliary, breast, cervical, chronic

XX
PS Disclosure; Fig 28; 87pp; English.
XX
CC The present sequence is the protein sequence of a 679 mutant diabody in
CC which antibody 679 VH has a Gln for Ile amino acid substitution at
CC position 3 and a Ser for Gln amino acid substitution at position 101.
CC Murine monoclonal antibody 679 binds with high affinity to molecules
CC containing the moiety histamine-succinyl-glycyl (HSG). The present
CC polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC sites for HSG); a pelB leader signal peptide (facilitates transport of
CC the polypeptide into the periplasmic space of Escherichia coli); and 6
CC His residues (allows purification by IMAC). The 679 diabody was expressed
CC in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC non-mutant polypeptide. The invention provides a bispecific diabody
CC comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC binding site. The HSG antigen binding site may comprise the VH and Vk
CC polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC technology and create a novel affinity enhancement system that shows
CC specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC for subsequent specific delivery of therapeutic radioisotopes carried by
CC HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC cardiovascular diseases and inflammatory diseases can be detected or
CC treated using the methods of the invention

PT   Novel multivalent, multi-specific binding protein useful for treating
PT   cancer, has first binding site having affinity towards hapten group and
PT   second and third binding sites each having affinity towards target
PT   antigen.
XX
PS   Claim 11; Fig 6; 43pp; English.
XX
CC   The present invention describes a multivalent, multi-specific binding
CC   protein (I) comprising a first binding site having an affinity towards a
CC   hapten group and a second and a third binding sites each having affinity
CC   towards a target antigen, which may be the same or a different target
CC   antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC   and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC   useful for delivering a diagnostic agent, a therapeutic agent, or its
CC   combination to a target, which involves administering (I) to a subject,
CC   waiting for a sufficient amount of time for an amount of the non-binding
CC   protein to clear the subject's blood stream, and administering to the
CC   subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC   agent, or its combination, that binds to a binding site of the binding
CC   protein. (I) is also useful for detecting or treating a human disorder,
CC   preferably cancer, autoimmune diseases, infectious diseases,
CC   cardiovascular diseases and inflammatory diseases. The present sequence
CC   represents a hMN14-scFv-L5 amino acid sequence, which is used in the
```

PS   Claim 14; Fig 31; 87pp; English.
XX
CC   The present sequence is the protein sequence for polypeptide #2 of a
CC   novel bispecific diabody comprising the VH region of monoclonal antibody
CC   hMN14 and the Vk region of monoclonal antibody 679. Mouse antibody 679
CC   binds with high affinity to molecules containing the moiety histamine-
CC   succinyl-glycyl (HSG). Humanised antibody hMN14 binds specifically to
CC   carcinoembryonic antigen. The bispecific diabody can be produced using
CC   recombinant DNA methods, e.g. in Escherichia coli host cells. It provides
CC   a novel affinity enhancement system that shows specific affinity for HSG
CC   and CEA. Such bispecific diabodies pre-target CEA positive tumours for
CC   subsequent specific delivery of therapeutic radioisotopes carried by HSG-
CC   carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

PT   Polyvalent protein complex for treating B-cell malignancy, Anthrax
PT   bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT   chains having immunoglobulin variable domains, to form complex having
PT   three antigen binding sites.
XX
PS   Example 2; SEQ ID NO 12; 148pp; English.
XX
CC   The invention relates to a polyvalent protein complex (PPC) (I),
CC   comprising a first and second polypeptide chains having immunoglobulin
CC   variable domains, where the first and second polypeptide chains form a
CC   complex having three antigen binding sites, and where each binding site
CC   comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC   useful in pretargeting method of treating or diagnosing, or treating and
CC   diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC   lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC   malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC   also useful for diagnosing a non-neoplastic disease or disorder where the
CC   disease or disorder is caused by a fungus, a virus, a bacterium, a
CC   mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC   infarction, ischemic heart disease, atherosclerotic plaques, graft
CC   rejection, Alzheimer's disease or inflammation caused by accretion of
CC   activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC   site of inflammation (caused by infectious agent). (I) is useful in
CC   antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC   molecule, and immunostaining technique. This sequence corresponds to the
CC   chimeric hBS14 polypeptide 2 containing heavy and light chain variable
CC   regions.

PT   Polyvalent protein complex for treating B-cell malignancy, Anthrax
PT   bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT   chains having immunoglobulin variable domains, to form complex having
PT   three antigen binding sites.
XX
PS   Example 1; SEQ ID NO 2; 148pp; English.
XX
CC   The invention relates to a polyvalent protein complex (PPC) (I),
CC   comprising a first and second polypeptide chains having immunoglobulin
CC   variable domains, where the first and second polypeptide chains form a
CC   complex having three antigen binding sites, and where each binding site
CC   comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC   useful in pretargeting method of treating or diagnosing, or treating and
CC   diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC   lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC   malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC   also useful for diagnosing a non-neoplastic disease or disorder where the
CC   disease or disorder is caused by a fungus, a virus, a bacterium, a
CC   mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC   infarction, ischemic heart disease, atherosclerotic plaques, graft
CC   rejection, Alzheimer's disease or inflammation caused by accretion of
CC   activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC   site of inflammation (caused by infectious agent). (I) is useful in
CC   antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC   molecule, and immunostaining technique. This sequence corresponds to the
CC   chimeric BS14HP polypeptide 2 containing heavy and light chain variable
CC   regions. The encoded polypeptide is designated alpha-factor-hMN-14Vk-
CC   GGGGS-hMN-14Vh-LEGGGS-h679Vk-6-His where the hMN14 is from a humanized
CC   antibody that binds specifically to the carcinoembryonic antigen and the
CC   h679 is a monoclonal antibody that binds the tri-peptide moiety histamine
CC   -succinyl-glycyl (HSG).

PT Novel multivalent, multi-specific binding protein useful for treating
PT cancer, has first binding site having affinity towards hapten group and
PT second and third binding sites each having affinity towards target
PT antigen.
XX
PS Claim 48; Fig 8A-B; 43pp; English.
XX
CC The present invention describes a multivalent, multi-specific binding
CC protein (I) comprising a first binding site having an affinity towards a
CC hapten group and a second and a third binding sites each having affinity
CC towards a target antigen, which may be the same or a different target
CC antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC useful for delivering a diagnostic agent, a therapeutic agent, or its
CC combination to a target, which involves administering (I) to a subject,
CC waiting for a sufficient amount of time for an amount of the non-binding
CC protein to clear the subject's blood stream, and administering to the
CC subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC agent, or its combination, that binds to a binding site of the binding
CC protein. (I) is also useful for detecting or treating a human disorder,
CC preferably cancer, autoimmune diseases, infectious diseases,
CC cardiovascular diseases and inflammatory diseases. The present sequence
CC represents the TS1 VH chain amino acid sequence, which is used in the
CC exemplification of the present invention

PT   New chimeric molecule useful in treating patients with disorders, such as
PT   melanoma, neuroendocrine disorders, prostate and small cell lung cancer
PT   comprises GD3 and/or PSMA binding domains of antibody.
XX
PS   Disclosure; Page 7-8; 35pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the GD3
CC   (ganglioside antigen) binding domain of antibody MB3.6, with any of 3
CC   variable gene sequences, or the PSMA (prostate-specific membrane antigen)
CC   binding domain of antibody 3D8, 4D4 and 3E11, with variable gene
CC   sequences, the zeta signalling chain of the T cell receptor and an
CC   intervening CD8alpha hinge in which cysteine residues have been mutated.
CC   The chimaeric molecules expressed in T cells or NK cells or other
CC   effector cells are useful in treating patients with cancers expressing
CC   the GD3 (MB3.6 derivatives) or PSMA antigen (3D8, 4D4, 3E11 derivatives),
CC   and/or together with each other or with heterologous constructs to engage
CC   additional stimulatory and functional properties of the effector cells to
CC   enhance the antitumour therapeutic efficacy (claimed). They are
CC   particularly useful in disorders including melanoma, neuroendocrine
CC   tumours and prostate and small cell lung cancer. The present sequence is
CC   a hMN14 antibody (specific to CEA antigen) in a fusion protein with the
CC   modified CD8alpha hinge and the T-cell receptor zeta chain (IgTCR)
CC   encoded by a retroviral vector. The hMN14 antibody coding region is
CC   replaced with the MB3.6, 3D8, 4D4 or 3E11 genes of the invention.

PT   New recombinant DNA construct comprising a promoter positioned to provide
PT   for expression of a polynucleotide encoding a polypeptide from a
PT   microbial source, useful for producing plants with improved properties.
XX
PS   Claim 1; SEQ ID NO 21148; 122pp; English.
XX
CC   The invention relates to a recombinant DNA construct comprising a
CC   promoter functional in a plant cell, where the promoter is positioned to
CC   provide for expression of a polynucleotide encoding a polypeptide from a
CC   microbial source. The invention also relates to a transformed plant
CC   comprising the recombinant DNA construct and a method of producing a
CC   transformed plant having an improved property. The plant is a crop plant
CC   such as maize or soybean. The method of producing a transformed plant
CC   having an improved property comprises transforming a plant with the
CC   recombinant DNA construct and growing the transformed plant, where the
CC   polynucleotide or polypeptide is useful for improving plant properties.
CC   The recombinant DNA construct is useful for producing plants with
CC   improved plant properties, e.g. improved cold, heat or drought tolerance,
```

CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polypeptide used in the
CC scope of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
PS Claim 1; SEQ ID NO 406; 122pp; English.
XX
CC The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polypeptide used in the
CC scope of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT New antibody library comprising cells comprising at least one integrated
PT retroviral vector expressing an antibody light or heavy chain, useful in
PT preparing a composition for diagnosing or treating disorders.
XX
PS Disclosure; Fig 6; 57pp; English.
XX
CC This invention relates to a new antibody library which comprises at least
CC 100 cells, each of which comprises at least one integrated retroviral
CC vector expressing an antibody light or heavy chain. Antibodies are of

CC increasing importance in human therapy, assay procedures and diagnostic
CC methods and a need exists for efficient methods of generating and
CC screening antibody libraries containing large numbers of antibodies. The
CC antibody library of the invention addresses this need, with the
CC additional advantage of strict control over multiplicity of infection
CC (MOI), and is useful in preparing a composition for diagnosing or
CC treating a wide variety of disorders. The present sequence is the amino
CC acid sequence of the MN14HCF protein, which was encoded by the Gateway
CC retroviral vectors used in the exemplification of the invention.

PT Mutant bispecific antibody which is rapidly cleared from a patient's
PT body, useful as a pretargeting agent in methods for diagnosing or
PT treating diseases, such as autoimmune disease, and disease caused by
PT infectious agents.
XX
PS Example; Fig 1; 68pp; English.
XX
CC The invention relates to a mutant bispecific antibody (mbAb1) comprising
CC at least a human hinge constant region from immunoglobulin G (IgG), two
CC single chain variable fragments (scFvs), and two variable fragments
CC (Fvs), where the constant region contains one or more amino acid
CC mutations in the heavy chain 2 (CH2) domain. The methods and antibody of
CC the invention are used to diagnose or treat an immune dysregulation
CC disease, an autoimmune disease, organ graft rejection, cardiovascular
CC disease, neurological disease (Alzheimer's disease) or graft vs. host
CC disease. The methods are also useful for treating a disease caused by a
CC fungus, virus, parasite, or bacterium. The methods may also be used for
CC intraoperative or endoscopic diagnosis to identify diseased tissue. The
CC autoimmune diseases that may be diagnosed or treated include acute or
CC chronic idiopathic thrombocytopenic purpura, dermatomyositis, Sydenham's
CC chorea, myasthenia gravis, systemic lupus erythematosus, lupus nephritis,
CC rheumatic fever, polyglandular syndromes and diabetes mellitus. The
CC current sequence represents the hMN-14 heavy chain amino acid sequence.

PT Genomic sequence of Photorhabdus luminescens and encoded polypeptides,
PT useful e.g. as therapeutic antimicrobials and agricultural pesticides.
XX
PS Claim 2; SEQ ID NO 78; 1205pp; French.
XX
CC The invention relates to the isolation of genes and their encoded
CC proteins from Photorhabdus luminescens. The isolated sequences are
CC sources of probes and primers for detecting the genome of P. luminescens
CC and related species; to study polymorphisms; for gene analysis and for
CC detection/amplification of the genes. Antibodies (Ab) raised against the
CC polypeptides encoded by the genes are used for detection/identification
CC of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that
CC carry a gene-containing vector are used to select compounds that
CC modulate, regulate, induce or inhibit expression of the genes in plants,
CC animals or microorganisms other than P. luminescens and are able to alter
CC response or sensitivity to toxins and antibiotics produced by P.
CC luminescens. Cells transformed to express the genes are useful for
CC recombinant production of the proteins, particularly toxins and
CC antibacterials useful as insecticides, bactericides and fungicides. The
CC genes, proteins, vectors containing the genes and Ab are also useful

```
CC   therapeutically (to treat microbial infection by bacteria or fungi that
CC   are sensitive to P. luminescens-encoded toxins or antibiotics) and as
CC   biopesticides. Other uses of the genes and the proteins are as virulence
CC   factors and for identifying targets of human diseases for which P.
CC   luminescens is a model (particularly plague and whooping cough). This
CC   sequence represents one of the isolated P. luminescens proteins

PT   agent.
XX
PS   Claim 14; SEQ ID NO 306; 275pp; English.
XX
CC   The invention relates to a method of identifying compounds that influence
CC   fat cell number or size comprising providing a cell that expresses a gene
CC   and an agent, exposing the cell to the agent and identifying fat cell
CC   number or size relative to cells not exposed to the agent. The method
CC   also comprises providing an expression vector and an agent, exposing the
CC   vector to the agent, detecting a change in expression of the gene
CC   relative to expression of the gene in an expression vector not exposed to
CC   the agent, treating a subject with the agent and identifying fat cell
CC   number or size in the subject. The agent comprises an antisense
CC   oligonucleotide. The subject comprises a mammal, preferably a human. The
CC   method also comprises providing a polypeptide and an agent, exposing the
CC   polypeptide to the agent, detecting binding of the agent to the
CC   polypeptide or a change in an activity of the polypeptide, treating a
CC   subject with the agent and identifying fat cell number or size in the
CC   subject. The agent comprises an antibody. A method of regulating fat cell
CC   number or size comprises providing a subject containing fat cells and an
CC   agent that changes the expression of a gene, and treating the subject
CC   with the agent under conditions so that fat cell size or number in the
CC   subject is altered. The method is useful for identifying compounds that
CC   influence fat cell number or size, for preparing a composition for
CC   treating or preventing obesity or diabetes. This sequence represents a
CC   fly polypeptide used in the scope of the invention.

PT Composition useful as cancer vaccine, comprises polypeptide having
PT antibody heavy chain fused to antibody light chain, or multivalent
PT antibody having two polypeptides with antibody heavy chain fused to
PT antibody light chain.
XX
PS Disclosure; SEQ ID NO 3; 101pp; English.
XX
CC The invention describes a composition (I) comprising: (a) a polypeptide
CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain; or (b) a multivalent antibody comprising at least
CC two polypeptides, where each of the polypeptides comprises at least one
CC antibody heavy chain fused to at least one antibody light chain. Also
CC described: (1) a composition (II) comprising a nucleic acid comprising at
CC least one antibody heavy chain gene and at least one antibody light chain
CC gene, where the nucleic acid encodes a polypeptide comprising at least
CC one antibody heavy chain fused to at least one antibody light chain; (2)
CC a method (M1) of binding an antigen, involves providing a polypeptide
CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain, and contacting the polypeptide with a sample having
CC an antigen under conditions such that the polypeptide binds to the
CC antigen; (3) a method (M2), which involves providing a vector comprising
CC a bicistronic expression construct comprising genes encoding an antibody
CC heavy chain gene and an antibody light chain gene, and altering the
CC nucleic acid sequence of a splice acceptor sequence or a splice donor
CC sequence in the antibody light chain gene or the antibody heavy chain
CC gene under conditions such that splicing is prevented at the splice
CC acceptor sequence or donor sequence; (4) a nucleic acid sequence produced
CC by (M2); (5) a vector (III) comprising a modified antibody heavy or light
CC gene, where modification eliminates a splice donor or acceptor sequence
CC in antibody heavy or light chain gene; and (6) a host cell comprising
CC (III). (I) is useful in in vitro binding assays for identifying antigens
CC in a mixture or determining the presence or absence of expression of a
CC particular protein. (I) is also useful as vaccine for treating cancer and
CC infections caused by pathogens e.g. virus or bacteria. The present
CC sequence represents an exemplary antibody fusion protein from the present
CC invention.

PS Claim 12; SEQ ID NO 9; 151pp; English.
XX
CC The invention relates to an antibody or its antigen-binding fragment,
CC which binds to CS1 (also known as SLAM family member 7, SLAMF7) and
CC inhibits immunoglobulin secretion, where the antibody binds to
CC substantially the same epitope as an antibody comprising an amino acid
CC sequence of any one of SEQ ID NOS: 3-26, the antibody comprises an amino
CC acid sequence of SEQ ID NOS: 27-44, and where the heavy chain variable
CC region comprises a complementarity determining region (CDR) of SEQ ID NO:
CC 33. Also disclosed are (i) a heavy chain CDR of an antibody comprising an
CC amino acid sequence of SEQ ID NOS: 9-11, 15-17, 21-23, 29-33, (ii) a
CC light chain CDR of an antibody comprising an amino acid sequence of SEQ
CC ID NOS: 12-14, 18-20, 24-26, 34-370, (iii) a pharmaceutical composition
CC comprising a pharmaceutical carrier and the antibody described above,
CC (iv) a method of inhibiting proliferation of CS1 expressing cells, (v)
CC inhibiting immunoglobulin secretion, and (vi) increasing antibody-
CC dependent cellular cytotoxicity (ADCC) activity of the antibody described
CC above, where the antibody has decreased levels of fucose or is mutated to
CC increase antibody affinity for a FcgammaR receptor. The antibody of the
CC invention inhibits the proliferation of leukocytes or cancer cells. The
CC antibody triggers cytotoxic effects on cells expressing CS1 or enhances

```
CC   cytotoxicity mediated by immune cells, or triggers ADCC-mediated
CC   cytotoxicity of cells expressing CS1. The antibody binds to substantially
CC   the same epitope as the antibody produced by a hybridoma cell line having
CC   ATCC accession number PTA-5091 or a Luc63 antibody. The antibody is
CC   produced by a hybridoma cell line having ATCC accession number PTA-5091
CC   or by a hybridoma cell line expressing Luc63 antibody. The antibody is a
CC   monoclonal antibody, e.g. a chimeric antibody, a humanized antibody, or a
CC   fully human antibody. The antibody is conjugated with a cytotoxic agent.
CC   The antibody comprises a heavy chain variable region comprising amino
CC   acid sequences of SEQ ID NOS: 3, 5, 7, or 27, and a light chain variable
CC   region comprising amino acid sequences of SEQ ID NOS: 4, 6, 8, or 28. The
CC   antibody, compositions, and methods are useful for diagnosing, preventing
CC   or treating plasma cell cancer, e.g. myeloma, multiple myeloma, myeloma
CC   of bone, extramedullary plasmacytoma, macroglobulinemia (including
CC   Waldenstrom's macroglobulinemia), heavy-chain disease, primary
CC   amyloidosis or monoclonal gammopathy of unknown significance, non-plasma
CC   cell cancer (chronic lymphocytic leukemia), autoimmune disorder,
CC   inflammatory bowel disease (IBD), or systemic lupus erythematosus (SLE).
CC   This sequence represents a CDR from a CS1 antibody.

PS Claim 10; Page 323; 715pp; English.
XX
CC The invention relates to novel foetal polypeptides encoded by
CC polynucleotides comprising one of 477 sequences fully defined in the
CC specification. The foetal polynucleotides and polypeptides are useful in
CC the treatment and diagnosis of diseases such as cancers, immune
CC disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders,
CC nervous system disorders and inflammation. The present sequence is a
CC polypeptide encoded by a cDNA assembled using an expressed sequence tag
CC (EST) found to be expressed in human foetal tissue cDNA libraries

PT Novel human diagnostic and therapeutic polypeptide useful for identifying
PT test compound which specifically binds to a polypeptide encoded by human
PT diagnostic and therapeutic polynucleotide, and to induce antibodies.
XX
PS Claim 27; SEQ ID NO 687; 591pp; English.
XX
CC The invention relates to novel human diagnostic and therapeutic
CC polynucleotides designated dithp (ACC46080-ACC46749) and to their encoded
CC proteins (DITHP; ABR41136-ABR41812). The invention also relates to
CC polynucleotide sequences at least 90% identical to the dithp cDNA
CC sequences of the invention; recombinant vectors, host cells and
CC transgenic organisms comprising a dithp nucleic acid sequence; the
CC recombinant production of DITHP proteins; antibodies specific for DITHP
CC proteins; microarrays comprising dithp nucleic acid sequences; methods of
CC detecting dithp nucleotide and protein sequences; methods of screening
CC for compounds which specifically bind a DITHP protein; and methods of
CC assessing the toxicity of test compounds using a dithp hybridisation
CC probe. Dithp nucleic acid sequences and DITHP proteins may be used in the
CC diagnosis of a wide variety of conditions including cancer and other cell

CC proliferative disorders; autoimmune or inflammatory disorders; bacterial,
CC viral, fungal or parasitic infections; hormonal disorders; metabolic
CC disorders; neurological disorders; gastrointestinal disorders; transport
CC disorders; and connective tissue disorders. They may also be used to
CC screen for modulators of protein activity or gene expression. DITHP
CC proteins can additionally be used in analysis of the proteome of a tissue
CC or cell type and to induce antibodies. The dithp nucleic acids are
CC additionally useful in somatic or germline gene therapy of the disorders
CC mentioned above, as a source of antisense sequences, as a source of
CC probes and primers, in genotyping and identification of individuals, in
CC the generation of transgenic animal models of human disease or knock in
CC humanised animals, in toxicological testing, and in transcript imaging.
CC The present sequence represents a DITHP protein which has enzyme
CC activity. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New antisense nucleic acids, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.
XX
PS Claim 25; SEQ ID NO 68018; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT sequence.
XX

PS Example 5; Fig 9b-c; 68pp; English.
XX
CC The present invention describes a method (M1) for amplifying a nucleic
CC acid strand. M1 comprises providing an engineered nucleic acid strand (S)
CC having a predetermined sequence at one end and a sequence complementary
CC to the predetermined sequence at the other, and contacting (S) with a
CC primer having the predetermined sequence in the presence of a polymers
CC and nucleotides under conditions suitable for polymerisation of the
CC nucleotides. Also described is an engineered nucleic acid strand (I)
CC having a predetermined sequence at one end and a sequence complementary
CC to the predetermined sequence at the other end. M1 is useful for
CC amplifying a nucleic acid. M1 can be used for producing an antibody
CC library. M1 is useful for preparing amplified products that can be
CC ligated into a suitable expression vector, where the vector can be used
CC to transform an appropriate host organism to produce the polypeptide or
CC protein encoded by the target sequence. M1 is useful to amplify a family
CC of related sequences to build a complex library such as, for example an
CC antibody library. M1 is useful not only for producing large amounts of
CC one target nucleic acid sequence, but also for amplifying simultaneously
CC more than one different target nucleic acid sequence located on the same
CC or different nucleic acid molecules. ACC62635 to ACC62753 and ABR54841 to
CC ABR54998 represent sequence used in the exemplification of the present
CC invention

CC   protein encoded by the target sequence. M1 is useful to amplify a family
CC   of related sequences to build a complex library such as, for example an
CC   antibody library. M1 is useful not only for producing large amounts of
CC   one target nucleic acid sequence, but also for amplifying simultaneously
CC   more than one different target nucleic acid sequence located on the same
CC   or different nucleic acid molecules. ACC62635 to ACC62753 and ABR54841 to
CC   ABR54998 represent sequence used in the exemplification of the present
CC   invention

PT   New recombinant antibodies to gp54 antigen - used for the detection of
PT   cancers and metastases and for therapy of cancers expressing the gp54
PT   antigen.
XX
PS   Claim 1; Fig 3; 33pp; English.
XX
CC   This polypeptide comprises the heavy chain variable region of murine
CC   monoclonal antibody (MAb) 48-127. This MAb recognises an epitope of gp54
CC   antigen (trop-2), a cancer marker expressed at the surface of bladder,
CC   breast, uterine and prostate cancers. MAb 48-127 (IgG1) reacts with a
CC   majority of human bladder cell lines and with human breast carcinoma cell
CC   lines. The invention relates to novel single chain antibody (scFv)
CC   molecules, including a 48-127 scFv (see AAW26799) that comprises the 48-
CC   127 VH and VL chains joined via a linker. Such scFvs can be used to
CC   detect cancers and micrometastases, e.g. bladder, prostate, breast or
CC   uterine cervix cancers, and may be linked to specific toxins for use in
CC   cancer therapy. The scFvs are not immunogenic and are distributed and
CC   captured by gp45-bearing target cells more quickly than conventional
CC   antibodies

PT   Novel 2495 cDNA, useful for treating osteoporosis, neurological diseases,
PT   Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.
XX
PS   Claim 1; SEQ ID NO 4024; 2449pp; English.
XX
CC   The invention relates to 2495 novel polynucleotides (I) and their encoded
CC   polypeptides, sequences hybridizing to these nucleotides, sequences
CC   encoding partial polypeptides and sequences having 70% or 90% identity to
CC   the nucleotide and protein sequences. The nucleotides and polypeptides
CC   are useful as diagnostic markers or therapeutic target for the diseases
CC   or morbid states. They are also useful for treating osteoporosis,
CC   neurological diseases, Alzheimer's diseases, Parkinson's diseases,
```

```
CC   dementia and various cancers. This sequence corresponds to a protein
CC   sequence of the invention.

PT   New antibody or its antigen-binding fragment specific to a vertebrate
PT   high mobility group box (HMGB) A box that inhibits release of a
PT   proinflammatory cytokine from a cell treated with HMGB protein, useful
PT   for treating, e.g. sepsis.
XX
PS   Example 4; SEQ ID NO 11; 123pp; English.
XX
CC   The invention provides antibodies, or their antigen-binding fragments,
CC   that bind to a vertebrate high mobility group box (HMGB) polypeptide, to
CC   methods of detecting and/or identifying an agent that binds to an HMGB
CC   polypeptide, methods of treating a condition in a subject characterized
CC   by activation of an inflammatory cytokine cascade, and methods of
CC   detecting an HMGB polypeptide in a sample. The antibody (or antigen-
CC   binding fragment) binds to a vertebrate HMGB A box but does not
CC   specifically bind to non-A box epitopes of HMGB, and inhibits release of
CC   a proinflammatory cytokine from a vertebrate cell treated with an HMGB
CC   protein. A method of treating a condition characterized by activation of
CC   an inflammatory cytokine cascade comprises administering an antibody of
CC   the invention, or its antigen-binding fragment. The condition is selected
CC   from sepsis, allograft rejection, arthritis, asthma, lupus, adult
CC   respiratory distress syndrome, chronic obstructive pulmonary disease,
CC   psoriasis, pancreatitis, peritonitis, burns, ischemia, Behcet's disease,
CC   graft versus host disease, inflammatory bowel disease, multiple sclerosis
CC   and cachexia, especially sepsis, arthritis, or lupus. The present
CC   sequence is the protein sequence of the heavy chain variable region (VH)
CC   of an anti-HMGB1 monoclonal antibody produced by claimed murine hybridoma
CC   2E11 HMGB1 (ATCC PTA-5431). This monoclonal antibody binds a peptide
CC   corresponding to amino acid residues 151-168 of human HMGB1 ADY85012.

```

CC The invention relates to an antibody or its antigen-binding fragment,
CC which binds to CS1 (also known as SLAM family member 7, SLAMF7) and
CC inhibits immunoglobulin secretion, where the antibody binds to
CC substantially the same epitope as an antibody comprising an amino acid
CC sequence of any one of SEQ ID NOS: 3-26, the antibody comprises an amino
CC acid sequence of SEQ ID NOS: 27-44, and where the heavy chain variable
CC region comprises a complementarity determining region (CDR) of SEQ ID NO:
CC 33. Also disclosed are (i) a heavy chain CDR of an antibody comprising an
CC amino acid sequence of SEQ ID NOS: 9-11, 15-17, 21-23, 29-33, (ii) a
CC light chain CDR of an antibody comprising an amino acid sequence of SEQ
CC ID NOS: 12-14, 18-20, 24-26, 34-370, (iii) a pharmaceutical composition
CC comprising a pharmaceutical carrier and the antibody described above,
CC (iv) a method of inhibiting proliferation of CS1 expressing cells, (v)
CC inhibiting immunoglobulin secretion, and (vi) increasing antibody-
CC dependent cellular cytotoxicity (ADCC) activity of the antibody described
CC above, where the antibody has decreased levels of fucose or is mutated to
CC increase antibody affinity for a FcgammaR receptor. The antibody of the
CC invention inhibits the proliferation of leukocytes or cancer cells. The
CC antibody triggers cytotoxic effects on cells expressing CS1 or enhances
CC cytotoxicity mediated by immune cells, or triggers ADCC-mediated
CC cytotoxicity of cells expressing CS1. The antibody binds to substantially
CC the same epitope as the antibody produced by a hybridoma cell line having
CC ATCC accession number PTA-5091 or a Luc63 antibody. The antibody is
CC produced by a hybridoma cell line having ATCC accession number PTA-5091
CC or by a hybridoma cell line expressing Luc63 antibody. The antibody is a
CC monoclonal antibody, e.g. a chimeric antibody, a humanized antibody, or a
CC fully human antibody. The antibody is conjugated with a cytotoxic agent.
CC The antibody comprises a heavy chain variable region comprising amino
CC acid sequences of SEQ ID NOS: 3, 5, 7, or 27, and a light chain variable
CC region comprising amino acid sequences of SEQ ID NOS: 4, 6, 8, or 28. The
CC antibody, compositions, and methods are useful for diagnosing, preventing
CC or treating plasma cell cancer, e.g. myeloma, multiple myeloma, myeloma
CC of bone, extramedullary plasmacytoma, macroglobulinemia (including
CC Waldenstrom's macroglobulinemia), heavy-chain disease, primary
CC amyloidosis or monoclonal gammopathy of unknown significance, non-plasma
CC cell cancer (chronic lymphocytic leukemia), autoimmune disorder,
CC inflammatory bowel disease (IBD), or systemic lupus erythematosus (SLE).
CC This sequence represents a CS1 antibody.

OM protein - protein search, using sw model

Run on: March 23, 2006, 01:40:40 ; Search time 43.0137 Seconds
(without alignments)
82.012 Million cell updates/sec

Title: US-10-755-382-23
Perfect score: 32
Sequence: 1 TYWMS 5

Scoring table: BLOSUM62
Gapop 10.0 , Gapext 0.5

Searched: 2166443 seqs, 705528306 residues

Total number of hits satisfying chosen parameters: 2166443

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%
Maximum Match 100%
Listing first 1000 summaries

Database : UniProt_05.80:*
1: uniprot_sprot:*
2: uniprot_trembl:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RT   "Complete genome sequence of Vibrio vulnificus CMCP6.";
RL   Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
CC   -!- FUNCTION: This protein specifically catalyzes the removal of
CC       signal peptides from prolipoproteins (By similarity).
CC   -!- CATALYTIC ACTIVITY: Release of signal peptides from bacterial
CC       membrane prolipoproteins. Hydrolyzes -Xaa-Yaa-Zaa-|-
CC       (S,diacylglyceryl)Cys-, in which Xaa is hydrophobic (preferably
CC       Leu), and Yaa (Ala or Ser) and Zaa (Gly or Ala) have small,
CC       neutral side chains.
CC   -!- PATHWAY: Lipoprotein biosynthesis; second step.
CC   -!- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane
CC       (By similarity).
CC   -!- SIMILARITY: Belongs to the peptidase A8 family.

CC   -!- FUNCTION: This protein specifically catalyzes the removal of
CC       signal peptides from prolipoproteins (By similarity).
CC   -!- CATALYTIC ACTIVITY: Release of signal peptides from bacterial
CC       membrane prolipoproteins. Hydrolyzes -Xaa-Yaa-Zaa-|-
CC       (S,diacylglyceryl)Cys-, in which Xaa is hydrophobic (preferably
CC       Leu), and Yaa (Ala or Ser) and Zaa (Gly or Ala) have small,
CC       neutral side chains.
CC   -!- PATHWAY: Lipoprotein biosynthesis; second step.
CC   -!- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane
CC       (By similarity).
CC   -!- SIMILARITY: Belongs to the peptidase A8 family.

CC   -!- FUNCTION: Involved in the synthesis of autoinducer 2 (AI-2) which
CC       is secreted by bacteria and is used to communicate both the cell
CC       density and the metabolic potential of the environment. The
CC       regulation of gene expression in response to changes in cell
CC       density is called quorum sensing. Catalyzes the transformation of
CC       S-ribosylhomocysteine (RHC) to homocysteine (HC) and 4,5-
CC       dihydroxy-2,3-pentadione (DPD) (By similarity).
CC   -!- CATALYTIC ACTIVITY: S-(5-deoxy-D-ribos-5-yl)-L-homocysteine = L-
CC       homocysteine + (S)-4,5-dihydroxypentan-2,3-dione.
CC   -!- COFACTOR: Binds 1 iron ion per subunit (By similarity).
CC   -!- SUBUNIT: Homodimer (By similarity).
CC   -!- SIMILARITY: Belongs to the luxS family.
CC   ----------------------------------------------------------------------
CC   This Swiss-Prot entry is copyright. It is produced through a collaboration
CC   between the Swiss Institute of Bioinformatics and the EMBL outstation -
CC   the European Bioinformatics Institute. There are no restrictions on its

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-253-794-23
; Sequence 23, Application US/09253794
; Patent No. US20020018750A1
;   GENERAL INFORMATION:
;        APPLICANT: HANSEN, Hans J.
;                   ARMOUR, Kathryn L.
;        TITLE OF INVENTION: CDR-GRAFTED TYPE III ANTI-CEA HUMANIZED
;                            MOUSE MONOCLONAL ANTIBODIES
;        NUMBER OF SEQUENCES: 58
;        CORRESPONDENCE ADDRESS:
;             ADDRESSEE: Foley & Lardner
;             STREET: 3000 K Street, N.W., Suite 500
;             CITY: Washington
;             STATE: D.C.
;             COUNTRY: USA
;             ZIP: 20007-5109
;        COMPUTER READABLE FORM:
;             MEDIUM TYPE: Floppy disk
;             COMPUTER: IBM PC compatible
;             OPERATING SYSTEM: PC-DOS/MS-DOS
;             SOFTWARE: PatentIn Release #1.0, Version #1.30
;        CURRENT APPLICATION DATA:
;             APPLICATION NUMBER: US/09/253,794
;             FILING DATE: 22-Feb-1999
;             CLASSIFICATION: <Unknown>
;        PRIOR APPLICATION DATA:
;             APPLICATION NUMBER: US 08/318,157
;             FILING DATE: 05-OCT-1994
;        ATTORNEY/AGENT INFORMATION:
;             NAME: SAXE, Bernhard D.
;             REGISTRATION NUMBER: 28,665
;             REFERENCE/DOCKET NUMBER: 18733/464
;        TELECOMMUNICATION INFORMATION:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 5; Page 39; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence is a murine derived CDR region which corresponds
CC to CDR 2 in the heavy chain of the humanised MAb. See AAR97313-97333

PT Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT comprises administering, either concurrently or sequentially, Class III
PT anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT therapeutic agent(s).
XX
PS Claim 6; SEQ ID NO 24; 88pp; English.
XX
CC The invention relates to a method of treating a non-medullary thyroid
CC carcinoma or treating medullary thyroid carcinoma involves administering
CC to a subject, either concurrently or sequentially, a Class III anti-CEA
CC (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC least one therapeutic agent. The antibody or its fragment comprises the
CC complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC ovarian cancer, in a subject. This sequence corresponds to the CDR2 of
CC the murine MN-14 antibody heavy chain variable region and used to
CC generate the humanised/chimeric antibody of the invention.

PT Treating non-medullary or medullary thyroid carcinoma, involves
PT administering to subject, either concurrently or sequentially, anti-
PT carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS Claim 8; Page 76; 122pp; English.
XX
CC This invention relates to methods for treating cancers that express
CC carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC antibodies that can be used following administration of an agent that
CC will increase antibody effector functions or following administration of
CC an amount of interferon effective to upregulate CEA expression in tumour
CC cells. The present invention describes the anti-CEA antibody as a class
CC III humanised murine monoclonal antibody that retains specificity for CEA
CC binding and is preferably an MN-14 antibody or fragment thereof.
CC Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC composition useful for the treatment of non-medullary or medullary
CC thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC carcinoma, as well as breast or lung cancer. Furthermore, it can
CC stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC cell growth and angiogenesis. This peptide sequence is a CDR region of
CC the humanised murine MN-14 antibody of the invention.

PT   New chimeric molecule from humanized antibody against carcinoembryonic
PT   antigen and having signaling molecules of T cells and other effector
PT   cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS   Disclosure; Page 9; 20pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the
CC   carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC   as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC   chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC   which the cysteine residues have been mutated, with the IgTCR molecule
CC   occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC   appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC   NK (not defined) or other effector cells are useful in treating patients
CC   with cancers expressing the CEA antigen, together with other or with
CC   heterologous constructs to engage additional stimulatory and functional
CC   properties of the effector cells to enhance the anti-tumour therapeutic
CC   efficacy. The cancer disorder includes colorectal, breast and lung
CC   cancers. The present sequence represents the heavy chain variable, VH,
CC   region of antibody hMN14. The VH protein is humanised (complementarity
CC   determining region-grafted) and has a leader peptide

CC   The present sequence is the protein sequence of hMN-14-0, which is
CC   designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa without a peptide linker. The use of the zero linker enables the
CC   secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC   The polypeptide also includes a pelB signal peptide, which precedes the
CC   VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific triabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC   acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC   lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,

PT   New kit comprising a multivalent, multi-specific binding protein and a
PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Disclosure; Fig 28; 87pp; English.
XX
CC   The present sequence is the protein sequence of a 679 mutant diabody in
CC   which antibody 679 VH has a Gln for Ile amino acid substitution at
CC   position 3 and a Ser for Gln amino acid substitution at position 101.
CC   Murine monoclonal antibody 679 binds with high affinity to molecules
CC   containing the moiety histamine-succinyl-glycyl (HSG). The present
CC   polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC   (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC   sites for HSG); a pelB leader signal peptide (facilitates transport of
CC   the polypeptide into the periplasmic space of Escherichia coli); and 6
CC   His residues (allows purification by IMAC). The 679 diabody was expressed
CC   in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC   non-mutant polypeptide. The invention provides a bispecific diabody
CC   comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC   binding site. The HSG antigen binding site may comprise the VH and Vk
CC   polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC   technology and create a novel affinity enhancement system that shows
```

```
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

PS   Claim 31; Fig 11; 62pp; English.
XX
CC   The present sequence is the protein sequence of hMN-14-scFv-L5, which was
CC   designed to form an hMN-14 diabody. The hMN-14-scFv-L5 polypeptide
CC   comprises the C-terminal end of anti-carcinoembryonic antigen (CEA)
CC   humanized monoclonal antibody hMN-14 VH linked to the N-terminal part of
CC   hMN-14 Vkappa by a peptide linker that enables the secreted polypeptide
CC   to dimerize into a diabody, forming 2 binding sites for CEA. The
CC   polypeptide also includes a pelB signal peptide, which precedes the VH
CC   moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. In the claimed monospecific diabody, each scFv comprises
CC   the present sequence. The diabody is an example of claimed multivalent
CC   binding proteins specific for a tumour-associated antigen. The binding
CC   proteins are used in the diagnosis and treatment of a tumour, carcinoma,
CC   melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma or myeloma,
CC   or a cancer selected from acute lymphoblastic leukaemia, acute
CC   myelogenous leukaemia, biliary, breast, cervical, chronic lymphocytic
CC   leukaemia, chronic myelogenous leukaemia, colorectal, endometrial,
CC   oesophageal, gastric, head and neck, Hodgkin's lymphoma, lung, medullary
CC   thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic, prostate and
CC   bladder

PT   cancer, has first binding site having affinity towards hapten group and
PT   second and third binding sites each having affinity towards target
PT   antigen.
XX
```

```
PS   Claim 11; Fig 6; 43pp; English.
XX
CC   The present invention describes a multivalent, multi-specific binding
CC   protein (I) comprising a first binding site having an affinity towards a
CC   hapten group and a second and a third binding sites each having affinity
CC   towards a target antigen, which may be the same or a different target
CC   antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC   and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC   useful for delivering a diagnostic agent, a therapeutic agent, or its
CC   combination to a target, which involves administering (I) to a subject,
CC   waiting for a sufficient amount of time for an amount of the non-binding
CC   protein to clear the subject's blood stream, and administering to the
CC   subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC   agent, or its combination, that binds to a binding site of the binding
CC   protein. (I) is also useful for detecting or treating a human disorder,
CC   preferably cancer, autoimmune diseases, infectious diseases,
CC   cardiovascular diseases and inflammatory diseases. The present sequence
CC   represents a hMN14-scFv-L5 amino acid sequence, which is used in the
CC   exemplification of the present invention

CC   The present sequence is the protein sequence for polypeptide #2 of a
CC   novel bispecific diabody comprising the VH region of monoclonal antibody
CC   hMN14 and the Vk region of monoclonal antibody 679. Mouse antibody 679
CC   binds with high affinity to molecules containing the moiety histamine-
CC   succinyl-glycyl (HSG). Humanised antibody hMN14 binds specifically to
CC   carcinoembryonic antigen. The bispecific diabody can be produced using
CC   recombinant DNA methods, e.g. in Escherichia coli host cells. It provides
CC   a novel affinity enhancement system that shows specific affinity for HSG
CC   and CEA. Such bispecific diabodies pre-target CEA positive tumours for
CC   subsequent specific delivery of therapeutic radioisotopes carried by HSG-
CC   carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

PT   Polyvalent protein complex for treating B-cell malignancy, Anthrax
PT   bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT   chains having immunoglobulin variable domains, to form complex having
PT   three antigen binding sites.
XX
PS   Example 2; SEQ ID NO 12; 148pp; English.
XX
CC   The invention relates to a polyvalent protein complex (PPC) (I),
CC   comprising a first and second polypeptide chains having immunoglobulin
CC   variable domains, where the first and second polypeptide chains form a
CC   complex having three antigen binding sites, and where each binding site
CC   comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC   useful in pretargeting method of treating or diagnosing, or treating and
CC   diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC   lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC   malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC   also useful for diagnosing a non-neoplastic disease or disorder where the
CC   disease or disorder is caused by a fungus, a virus, a bacterium, a
CC   mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC   infarction, ischemic heart disease, atherosclerotic plaques, graft
CC   rejection, Alzheimer's disease or inflammation caused by accretion of
CC   activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC   site of inflammation (caused by infectious agent). (I) is useful in
CC   antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
```

```
CC   molecule, and immunostaining technique. This sequence corresponds to the
CC   chimeric hBS14 polypeptide 2 containing heavy and light chain variable
CC   regions.

PT   Polyvalent protein complex for treating B-cell malignancy, Anthrax
PT   bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT   chains having immunoglobulin variable domains, to form complex having
PT   three antigen binding sites.
XX
PS   Example 1; SEQ ID NO 2; 148pp; English.
XX
CC   The invention relates to a polyvalent protein complex (PPC) (I),
CC   comprising a first and second polypeptide chains having immunoglobulin
CC   variable domains, where the first and second polypeptide chains form a
CC   complex having three antigen binding sites, and where each binding site
CC   comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC   useful in pretargeting method of treating or diagnosing, or treating and
CC   diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC   lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC   malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC   also useful for diagnosing a non-neoplastic disease or disorder where the
CC   disease or disorder is caused by a fungus, a virus, a bacterium, a
CC   mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC   infarction, ischemic heart disease, atherosclerotic plaques, graft
CC   rejection, Alzheimer's disease or inflammation caused by accretion of
CC   activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC   site of inflammation (caused by infectious agent). (I) is useful in
CC   antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC   molecule, and immunostaining technique. This sequence corresponds to the
CC   chimeric BS14HP polypeptide 2 containing heavy and light chain variable
CC   regions. The encoded polypeptide is designated alpha-factor-hMN-14Vk-
CC   GGGGS-hMN-14Vh-LEGGGS-h679Vk-6-His where the hMN14 is from a humanized
CC   antibody that binds specifically to the carcinoembryonic antigen and the
CC   h679 is a monoclonal antibody that binds the tri-peptide moiety histamine
CC   -succinyl-glycyl (HSG).

PT   Polyvalent protein complex for treating B-cell malignancy, Anthrax
```

PT bacillus, Alzheimer's disease, reovirus, Microsporum, has polypeptide
PT chains having immunoglobulin variable domains, to form complex having
PT three antigen binding sites.
XX
PS Example 1; SEQ ID NO 1; 148pp; English.
XX
CC The invention relates to a polyvalent protein complex (PPC) (I),
CC comprising a first and second polypeptide chains having immunoglobulin
CC variable domains, where the first and second polypeptide chains form a
CC complex having three antigen binding sites, and where each binding site
CC comprises an immunoglobulin heavy and light chain variable domain. (I) is
CC useful in pretargeting method of treating or diagnosing, or treating and
CC diagnosing a neoplastic condition such as carcinomas, sarcomas, gliomas,
CC lymphomas, leukemias or melanomas. (I) is useful for treating B-cell
CC malignancy, or B-cell immune or autoimmune disorder in a subject. (I) is
CC also useful for diagnosing a non-neoplastic disease or disorder where the
CC disease or disorder is caused by a fungus, a virus, a bacterium, a
CC mycoplasma, a parasite e.g. malaria, an autoimmune disease, myocardial
CC infarction, ischemic heart disease, atherosclerotic plaques, graft
CC rejection, Alzheimer's disease or inflammation caused by accretion of
CC activated granulocytes, monocytes, lymphoid cells or macrophages at the
CC site of inflammation (caused by infectious agent). (I) is useful in
CC antibody dependent enzyme prodrug therapy (ADEPT), for detecting target
CC molecule, and immunostaining technique. This sequence corresponds to the
CC chimeric BS14HP polypeptide 1 containing heavy and light chain variable
CC regions. The encoded polypeptide is designated alpha-factor-h679Vh-GGGGS-
CC hMN-14Vk-LEGGGS-hMN-14Vh-6-His where the hMN14 is from a humanized
CC antibody that binds specifically to the carcinoembryonic antigen and the
CC h679 is a monoclonal antibody that binds the tri-peptide moiety histamine
CC -succinyl-glycyl (HSG).

PT Novel multivalent, multi-specific binding protein useful for treating
PT cancer, has first binding site having affinity towards hapten group and
PT second and third binding sites each having affinity towards target
PT antigen.
XX
PS Claim 48; Fig 8A-B; 43pp; English.
XX
CC The present invention describes a multivalent, multi-specific binding
CC protein (I) comprising a first binding site having an affinity towards a
CC hapten group and a second and a third binding sites each having affinity
CC towards a target antigen, which may be the same or a different target
CC antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC useful for delivering a diagnostic agent, a therapeutic agent, or its
CC combination to a target, which involves administering (I) to a subject,
CC waiting for a sufficient amount of time for an amount of the non-binding
CC protein to clear the subject's blood stream, and administering to the
CC subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC agent, or its combination, that binds to a binding site of the binding
CC protein. (I) is also useful for detecting or treating a human disorder,
CC preferably cancer, autoimmune diseases, infectious diseases,
CC cardiovascular diseases and inflammatory diseases. The present sequence
CC represents the TS1 VH chain amino acid sequence, which is used in the
CC exemplification of the present invention

XX
PT   New chimeric molecule from humanized antibody against carcinoembryonic
PT   antigen and having signaling molecules of T cells and other effector
PT   cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS   Disclosure; Page 7-8; 20pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the
CC   carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC   as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC   chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC   which the cysteine residues have been mutated, with the IgTCR molecule
CC   occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC   appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC   NK (not defined) or other effector cells are useful in treating patients
CC   with cancers expressing the CEA antigen, together with other or with
CC   heterologous constructs to engage additional stimulatory and functional
CC   properties of the effector cells to enhance the anti-tumour therapeutic
CC   efficacy. The cancer disorder includes colorectal, breast and lung
CC   cancers. The present sequence represents the chimaeric molecule of the
CC   invention

XX
PT   New chimeric molecule useful in treating patients with disorders, such as
PT   melanoma, neuroendocrine disorders, prostate and small cell lung cancer
PT   comprises GD3 and/or PSMA binding domains of antibody.
XX
PS   Disclosure; Page 7-8; 35pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the GD3
CC   (ganglioside antigen) binding domain of antibody MB3.6, with any of 3
CC   variable gene sequences, or the PSMA (prostate-specific membrane antigen)
CC   binding domain of antibody 3D8, 4D4 and 3E11, with variable gene
CC   sequences, the zeta signalling chain of the T cell receptor and an
CC   intervening CD8alpha hinge in which cysteine residues have been mutated.
CC   The chimaeric molecules expressed in T cells or NK cells or other
CC   effector cells are useful in treating patients with cancers expressing
CC   the GD3 (MB3.6 derivatives) or PSMA antigen (3D8, 4D4, 3E11 derivatives),
CC   and/or together with each other or with heterologous constructs to engage
CC   additional stimulatory and functional properties of the effector cells to
CC   enhance the antitumour therapeutic efficacy (claimed). They are
CC   particularly useful in disorders including melanoma, neuroendocrine
CC   tumours and prostate and small cell lung cancer. The present sequence is
CC   a hMN14 antibody (specific to CEA antigen) in a fusion protein with the
CC   modified CD8alpha hinge and the T-cell receptor zeta chain (IgTCR)
CC   encoded by a retroviral vector. The hMN14 antibody coding region is
CC   replaced with the MB3.6, 3D8, 4D4 or 3E11 genes of the invention.

PT   New antibody library comprising cells comprising at least one integrated
PT   retroviral vector expressing an antibody light or heavy chain, useful in
PT   preparing a composition for diagnosing or treating disorders.
XX
PS   Disclosure; Fig 6; 57pp; English.
```

```
XX
CC   This invention relates to a new antibody library which comprises at least
CC   100 cells, each of which comprises at least one integrated retroviral
CC   vector expressing an antibody light or heavy chain. Antibodies are of
CC   increasing importance in human therapy, assay procedures and diagnostic
CC   methods and a need exists for efficient methods of generating and
CC   screening antibody libraries containing large numbers of antibodies. The
CC   antibody library of the invention addresses this need, with the
CC   additional advantage of strict control over multiplicity of infection
CC   (MOI), and is useful in preparing a composition for diagnosing or
CC   treating a wide variety of disorders. The present sequence is the amino
CC   acid sequence of the MN14HCF protein, which was encoded by the Gateway
CC   retroviral vectors used in the exemplification of the invention.

PT   Mutant bispecific antibody which is rapidly cleared from a patient's
PT   body, useful as a pretargeting agent in methods for diagnosing or
PT   treating diseases, such as autoimmune disease, and disease caused by
PT   infectious agents.
XX
PS   Example; Fig 1; 68pp; English.
XX
CC   The invention relates to a mutant bispecific antibody (mbAb1) comprising
CC   at least a human hinge constant region from immunoglobulin G (IgG), two
CC   single chain variable fragments (scFvs), and two variable fragments
CC   (Fvs), where the constant region contains one or more amino acid
CC   mutations in the heavy chain 2 (CH2) domain. The methods and antibody of
CC   the invention are used to diagnose or treat an immune dysregulation
CC   disease, an autoimmune disease, organ graft rejection, cardiovascular
CC   disease, neurological disease (Alzheimer's disease) or graft vs. host
CC   disease. The methods are also useful for treating a disease caused by a
CC   fungus, virus, parasite, or bacterium. The methods may also be used for
CC   intraoperative or endoscopic diagnosis to identify diseased tissue. The
CC   autoimmune diseases that may be diagnosed or treated include acute or
CC   chronic idiopathic thrombocytopenic purpura, dermatomyositis, Sydenham's
CC   chorea, myasthenia gravis, systemic lupus erythematosus, lupus nephritis,
CC   rheumatic fever, polyglandular syndromes and diabetes mellitus. The
CC   current sequence represents the hMN-14 heavy chain amino acid sequence.

PT   Composition useful as cancer vaccine, comprises polypeptide having
PT   antibody heavy chain fused to antibody light chain, or multivalent
PT   antibody having two polypeptides with antibody heavy chain fused to
PT   antibody light chain.
XX
PS   Disclosure; SEQ ID NO 3; 101pp; English.
XX
CC   The invention describes a composition (I) comprising: (a) a polypeptide
CC   comprising at least one antibody heavy chain fused to at least one
CC   antibody light chain; or (b) a multivalent antibody comprising at least
CC   two polypeptides, where each of the polypeptides comprises at least one
CC   antibody heavy chain fused to at least one antibody light chain. Also
CC   described: (1) a composition (II) comprising a nucleic acid comprising at
CC   least one antibody heavy chain gene and at least one antibody light chain
CC   gene, where the nucleic acid encodes a polypeptide comprising at least
CC   one antibody heavy chain fused to at least one antibody light chain; (2)
CC   a method (M1) of binding an antigen, involves providing a polypeptide
```

CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain, and contacting the polypeptide with a sample having
CC an antigen under conditions such that the polypeptide binds to the
CC antigen; (3) a method (M2), which involves providing a vector comprising
CC a bicistronic expression construct comprising genes encoding an antibody
CC heavy chain gene and an antibody light chain gene, and altering the
CC nucleic acid sequence of a splice acceptor sequence or a splice donor
CC sequence in the antibody light chain gene or the antibody heavy chain
CC gene under conditions such that splicing is prevented at the splice
CC acceptor sequence or donor sequence; (4) a nucleic acid sequence produced
CC by (M2); (5) a vector (III) comprising a modified antibody heavy or light
CC gene, where modification eliminates a splice donor or acceptor sequence
CC in antibody heavy or light chain gene; and (6) a host cell comprising
CC (III). (I) is useful in in vitro binding assays for identifying antigens
CC in a mixture or determining the presence or absence of expression of a
CC particular protein. (I) is also useful as vaccine for treating cancer and
CC infections caused by pathogens e.g. virus or bacteria. The present
CC sequence represents an exemplary antibody fusion protein from the present
CC invention.

XX
CC The invention relates to an antibody or its antigen-binding fragment,
CC which binds to CS1 (also known as SLAM family member 7, SLAMF7) and
CC inhibits immunoglobulin secretion, where the antibody binds to
CC substantially the same epitope as an antibody comprising an amino acid
CC sequence of any one of SEQ ID NOS: 3-26, the antibody comprises an amino
CC acid sequence of SEQ ID NOS: 27-44, and where the heavy chain variable
CC region comprises a complementarity determining region (CDR) of SEQ ID NO:
CC 33. Also disclosed are (i) a heavy chain CDR of an antibody comprising an
CC amino acid sequence of SEQ ID NOS: 9-11, 15-17, 21-23, 29-33, (ii) a
CC light chain CDR of an antibody comprising an amino acid sequence of SEQ
CC ID NOS: 12-14, 18-20, 24-26, 34-370, (iii) a pharmaceutical composition
CC comprising a pharmaceutical carrier and the antibody described above,
CC (iv) a method of inhibiting proliferation of CS1 expressing cells, (v)
CC inhibiting immunoglobulin secretion, and (vi) increasing antibody-
CC dependent cellular cytotoxicity (ADCC) activity of the antibody described
CC above, where the antibody has decreased levels of fucose or is mutated to
CC increase antibody affinity for a FcgammaR receptor. The antibody of the
CC invention inhibits the proliferation of leukocytes or cancer cells. The
CC antibody triggers cytotoxic effects on cells expressing CS1 or enhances
CC cytotoxicity mediated by immune cells, or triggers ADCC-mediated
CC cytotoxicity of cells expressing CS1. The antibody binds to substantially
CC the same epitope as the antibody produced by a hybridoma cell line having
CC ATCC accession number PTA-5091 or a Luc63 antibody. The antibody is
CC produced by a hybridoma cell line having ATCC accession number PTA-5091
CC or by a hybridoma cell line expressing Luc63 antibody. The antibody is a
CC monoclonal antibody, e.g. a chimeric antibody, a humanized antibody, or a
CC fully human antibody. The antibody is conjugated with a cytotoxic agent.
CC The antibody comprises a heavy chain variable region comprising amino
CC acid sequences of SEQ ID NOS: 3, 5, 7, or 27, and a light chain variable
CC region comprising amino acid sequences of SEQ ID NOS: 4, 6, 8, or 28. The
CC antibody, compositions, and methods are useful for diagnosing, preventing
CC or treating plasma cell cancer, e.g. myeloma, multiple myeloma, myeloma
CC of bone, extramedullary plasmacytoma, macroglobulinemia (including
CC Waldenstrom's macroglobulinemia), heavy-chain disease, primary
CC amyloidosis or monoclonal gammopathy of unknown significance, non-plasma
CC cell cancer (chronic lymphocytic leukemia), autoimmune disorder,
CC inflammatory bowel disease (IBD), or systemic lupus erythematosus (SLE).

PT Method of resurfacing of rodent antibodies to produce humanised antibody
PT forms - for producing non human antibodies with improved therapeutic
PT efficiency by presenting human surface on V-region.
XX
PS Example 1; Fig 3B; 230pp; English.
XX
CC The present sequence is that of the heavy chain variable (LC VR) region
CC of murine antibody 2fbj. This sequence was aligned with 11 other known
CC antibody LC VRs and a set of framework positions of surface exposed amino
CC acid residues was determined. This information can be used in a method to
CC determine how to modify a rodent antibody or fragment by resurfacing in
CC order to produce a humanised rodent antibody. Residues (determined from
CC alignment) at positions 118, 120, 122, 126, 127, 128, 130, 131, 132, 136,
CC 143, 145, 160, 161, 162, 183, 184, 186, 187, 195, 196, 197, 208, 209,
CC 210, 212 (numbered from the N-terminal of the complete heavy chain) are
CC accessible residues. None of the entire combinations of surface residues
CC in the murine sequences were found in the human sequences and vice versa.
CC However the residues in individual positions appear to be conserved

PT   Recovering a polypeptide that unfolds reversibly from a repertoire of
PT   polypeptides for treating e.g., cancer, by unfolding a portion of the
PT   displayed polypeptides and refolding a portion of the unfolded
PT   polypeptides.
XX
PS   Disclosure; SEQ ID NO 41; 222pp; English.
XX
CC   The invention describes a method of recovering a polypeptide that unfolds
CC   reversibly from a repertoire of polypeptides that unfolds reversibly and
CC   has a common selectable characteristic that distinguishes folded
CC   polypeptides from unfolded or misfolded polypeptides. The method
CC   comprises: providing a polypeptide display system comprising the
CC   repertoire of displayed polypeptides; unfolding at least a portion of the
CC   displayed polypeptides; refolding at least a portion of the unfolded
CC   polypeptides; and recovering at least one polypeptide that unfolds
CC   reversibly and has the selectable characteristic from the refolded
CC   portion. The method is useful in recovering a polypeptide that unfolds
CC   reversibly from a repertoire of polypeptides that unfolds reversibly. The
CC   library or repertoire is useful for selecting a polypeptide comprising an
CC   antibody variable domain that unfolds reversibly or a polypeptide that
CC   refolds reversibly and comprising an antibody format. The polypeptide is
CC   useful in the manufacture of a medicament for diagnosing, treating or
CC   preventing a disease or medical condition mediated by a cytokine,
CC   cytokine receptor, enzyme, enzyme co-factor or DNA binding protein, such
CC   as an inflammatory state, allergic hypersensitivity, cancer, bacterial or
CC   viral infection or an autoimmune disorder, e.g., asthma, psoriasis, Type
CC   I diabetes, multiple sclerosis, rheumatoid arthritis, systemic lupus
CC   erythematosus, Crohn's disease, myasthenia gravis, leukemia or solid
CC   tumor. This is the amino acid sequence of an immunoglobulin variable
CC   region associated with the protein purification method of the invention.

PT   New cryptic collagen antibody with one or more complementarity
PT   determining regions, useful for diagnosing and treating disorders
PT   associated with angiogenesis, tumor growth and/or cancer metastasis.
XX
PS   Claim 1; SEQ ID NO 28; 232pp; English.
XX
CC   This invention relates to a novel grafted antibody or its functional
CC   fragment comprising one or more complementarity determining regions
CC   (CDRs) of a defined light CDR and a heavy CDR with at least one amino
CC   acid (aa) substitution where the antibody has specific binding activity
CC   for a cryptic collagen epitope. The growth of all solid tumours requires
CC   new blood vessel growth, angiogenesis, inhibition of which is an approach
CC   to limiting tumour growth. The invention may allow development of
CC   therapeutics with a cytostatic activity as a collagen agonist or
CC   antagonist. The invention is useful for diagnosing and treating disorders
CC   associated with angiogenesis, tumour growth and/or cancer metastasis. The
CC   present sequence is the partial amino acid sequence of a mouse anti-
CC   cryptic collagen site antibody HUIV26 variable region heavy chain CDR
CC   which is related to the invention.

PT   New isolated monoclonal antibody that binds Ebola virus GP, which
PT   monoclonal antibody comprises a heavy chain variable region, useful for
PT   treating or ameliorating Ebola virus infection.
XX
PS   Claim 31; Page 64; 68pp; English.
XX
CC   The specification describes monoclonal antibodies that bind Ebola virus
CC   glycoprotein. The antibodies are EGP6D8-1-1, EGP13F6-1-2, and EGP13C6-1-
CC   1. The monoclonal antibodies of the invention are useful for treating or
CC   ameliorating an Ebola virus infection. The antibodies were found to be
CC   effective when administered 2 days after challenge, after significant
CC   viral replication had occurred. ADL27482-ADL27484 represents
CC   complementarity determining regions (CDRs) from the heavy chain of a
CC   monoclonal antibody of the invention.

XX
CC The invention relates to an antibody or its antigen-binding fragment,
CC which binds to CS1 (also known as SLAM family member 7, SLAMF7) and
CC inhibits immunoglobulin secretion, where the antibody binds to
CC substantially the same epitope as an antibody comprising an amino acid
CC sequence of any one of SEQ ID NOS: 3-26, the antibody comprises an amino
CC acid sequence of SEQ ID NOS: 27-44, and where the heavy chain variable
CC region comprises a complementarity determining region (CDR) of SEQ ID NO:
CC 33. Also disclosed are (i) a heavy chain CDR of an antibody comprising an
CC amino acid sequence of SEQ ID NOS: 9-11, 15-17, 21-23, 29-33, (ii) a
CC light chain CDR of an antibody comprising an amino acid sequence of SEQ
CC ID NOS: 12-14, 18-20, 24-26, 34-370, (iii) a pharmaceutical composition
CC comprising a pharmaceutical carrier and the antibody described above,
CC (iv) a method of inhibiting proliferation of CS1 expressing cells, (v)
CC inhibiting immunoglobulin secretion, and (vi) increasing antibody-
CC dependent cellular cytotoxicity (ADCC) activity of the antibody described
CC above, where the antibody has decreased levels of fucose or is mutated to
CC increase antibody affinity for a FcgammaR receptor. The antibody of the
CC invention inhibits the proliferation of leukocytes or cancer cells. The
CC antibody triggers cytotoxic effects on cells expressing CS1 or enhances
CC cytotoxicity mediated by immune cells, or triggers ADCC-mediated
CC cytotoxicity of cells expressing CS1. The antibody binds to substantially
CC the same epitope as the antibody produced by a hybridoma cell line having
CC ATCC accession number PTA-5091 or a Luc63 antibody. The antibody is
CC produced by a hybridoma cell line having ATCC accession number PTA-5091
CC or by a hybridoma cell line expressing Luc63 antibody. The antibody is a
CC monoclonal antibody, e.g. a chimeric antibody, a humanized antibody, or a
CC fully human antibody. The antibody is conjugated with a cytotoxic agent.
CC The antibody comprises a heavy chain variable region comprising amino
CC acid sequences of SEQ ID NOS: 3, 5, 7, or 27, and a light chain variable
CC region comprising amino acid sequences of SEQ ID NOS: 4, 6, 8, or 28. The
CC antibody, compositions, and methods are useful for diagnosing, preventing
CC or treating plasma cell cancer, e.g. myeloma, multiple myeloma, myeloma
CC of bone, extramedullary plasmacytoma, macroglobulinemia (including
CC Waldenstrom's macroglobulinemia), heavy-chain disease, primary
CC amyloidosis or monoclonal gammopathy of unknown significance, non-plasma
CC cell cancer (chronic lymphocytic leukemia), autoimmune disorder,
CC inflammatory bowel disease (IBD), or systemic lupus erythematosus (SLE).
CC This sequence represents a CDR from an anti-CS1 antibody.

PT Humanized immunoglobulin for treating a CC-chemokine receptor 2-mediated
PT disorder in a patient, comprises a binding specificity for CCR2, and a
PT non-human antigen binding region and human immunoglobulin.
XX
PS Disclosure; Page 157; 183pp; English.
XX
CC The patent discloses a humanised antibody or its antigen-binding
CC fragment, having binding specificity for CC-chemokine receptor 2 (CCR2),
CC comprising an antigen binding region of non-human origin and at least a
CC portion of an immunoglobulin of human origin. The humanised antibodies
CC are useful for inhibiting the interaction of a cell expressing CCR2. They
CC are useful for inhibiting or treating HIV infection. The proteins of the
CC invention are useful for inhibiting leukocyte trafficking, for treating
CC CCR2-mediated disorders such as inflammatory disorder, autoimmune
CC disorders such as rheumatoid arthritis and multiple sclerosis,
CC atherogenesis and atherosclerosis, and for inhibiting restenosis. They
CC are useful in therapy or diagnosis, and in the manufacture of a
CC medicament for treating CCR-2 mediated disease. They are also useful for
CC treating allergy, anaphylaxis, malignancy, chronic and acute
CC inflammation, histamine and IgE- mediated allergic reaction, shock,
CC stenosis, allograft rejection, fibrotic disease, asthma, inflammatory
CC glomerulopathies, acquired immune deficiency syndrome (AIDS), restenosis
CC associated with vascular intervention, including angioplasty and/or stent
CC placement in a mammal. Humanised antibodies are also useful for
CC inhibiting narrowing of the lumen of a vessel in a mammal, and inhibiting
CC neointimal hyperplasia of a vessel in a mammal, preferably associated
CC with vascular intervention. The present sequence is mouse germline heavy
CC chain variable (VH) region, V-H_441/V441

PT New humanized immunoglobulin CC-chemokine receptor 2 (CCR2) antagonists,
PT useful for diagnosing and/or treating inflammatory or autoimmune
PT diseases, and HIV infection.
XX
PS Example 2; SEQ ID NO 47; 128pp; English.
XX
CC The invention relates to humanised immunoglobulin heavy and light chains
CC which have specificity for the CC-chemokine receptor 2 (CCR2) and an
CC immunoglobulin or its antigen binding fragment comprising the chains. The
CC humanised immunoglobulin or its antigen binding fragment preferably
CC comprises two heavy chains and two light chains. The humanised
CC immunoglobulin and its heavy and light chains are useful for the
CC diagnosis, prevention and/or treatment of diseases or conditions

CC associated with aberrant expression or activity of the CCR2 polypeptide, CC such as inflammatory diseases, autoimmune disorders, graft rejection, HIV CC infection and atherosclerosis. This sequence represents a mouse CC immunoglobulin protein of the invention.

PT New humanized immunoglobulin or its antigen binding portion having
PT binding specificity for CC-chemokine receptor 2 and having a heavy chain
PT and light chain, for treating inflammatory diseases, HIV, and autoimmune
PT diseases.
XX
PS Disclosure; SEQ ID NO 47; 192pp; English.
XX
CC The invention describes a humanized immunoglobulin (I) or its antigen
CC binding portion having binding specificity for CC-chemokine receptor 2
CC (CCR2) and having a heavy chain and a light chain, where the heavy chain
CC comprises a fully defined 117 and 330 amino acid (SEQ ID NO: 17 and 110)
CC sequence, given in specification or its portion, and the light chain
CC comprises a fully defined 112 amino acid (SEQ ID NO: 12) sequence given
CC in specification. Also described are: a humanized immunoglobulin heavy
CC chain, or its antigen binding fragment, having binding specificity for
CC CCR2 and comprising the amino acid sequence of (SEQ ID NO: 17) and the
CC amino acid of (SEQ ID NO: 110), or its portion; and a humanized
CC immunoglobulin light chain, or its antigen binding fragment, having
CC binding specificity for CCR2 and comprising the amino acid sequence of
CC (SEQ ID NO: 12) and the fully defined 107 amino acid (SEQ ID NO: 112)
CC sequence, given in specification. The following are disclosed: isolated
CC nucleic acid molecules comprising nucleic acid sequence encoding (I); a
CC construct comprising nucleic acid molecule encoding (I); and host cell
CC comprising the nucleic acid molecule. (I) Is useful as a therapeutic
CC agent for controlling lymphocyte homing the mucosal lymphoid tissue thus
CC reducing inflammatory response, for use in the treatment of diseases
CC associated with leukocyte infiltration of tissue, e.g. in the treatment
CC of inflammatory diseases, autoimmune diseases, graft rejection, HIV
CC infection and monocyte-mediated disorders such as atherosclerosis. (I) Is
CC useful for detecting and/or measuring the level of CCR2 in a sample (e.g.
CC tissues or body fluids such as inflammatory exudates, blood, serum, bowel
CC fluid), and for modulating binding function and/or leukocyte trafficking
CC modulated by CCR2. This sequence represents a murine germline heavy chain
CC variable region used in a comparison with a murine 1D9 antibody heavy
CC chain variable region fragment in the creation of a humanized anti-CCR2-
CC antibody.

PT   Treating or preventing diseases associated with expression of amyloid-
PT   beta peptide, e.g. Alzheimer's disease or Down's syndrome, comprises
PT   administering an amount of an antibody directed against amyloid-beta
PT   peptide.
XX
PS   Example 4; Page 63; 89pp; English.
XX
CC   The specification describes a method for treating Alzheimer's disease.
CC   The method comprises administering to a subject a pharmaceutical
CC   composition comprising an antibody that binds preferentially to amino
CC   acids 28-40 of beta-amyloid peptide (1-40). The method is useful for
CC   diagnosing, treating or preventing diseases associated with expression of
CC   amyloid-beta peptide, such as Alzheimer's disease or Down's syndrome. The
CC   present sequence represents the humanised heavy chain variable domain
CC   (germline framework VH3) of the monoclonal antibody 2286. This antibody
CC   represents an antibody of the invention.

PT   Monoclonal antibody capable of binding to human breast cancer antigen
PT   useful for affinity purification, drug or toxin targeting, imaging, and
PT   treating cancer.
XX
PS   Disclosure; Fig 9; 57pp; English.
XX
CC   The present invention describes a monoclonal antibody (MAb) (I) that
CC   binds to a human breast cancer antigen that is also bound by MAb 454C11
CC   and 520C9 (produced hybridoma ATCC HB8484 and HB8696, respectively). Also
CC   described is a hybridoma that produces (I). (I) is useful in specific
CC   binding assays, affinity purification, drug or toxin targeting, imaging,
CC   and genetic or immunological therapeutics for various cancers. The
CC   present sequence represents a VH domain derived from a 317G5 hybridoma,
CC   which is used in the exemplification of the present invention

PT New anti-protein C inhibitor (PCI) antibody, inhibiting PCI with respect
PT to activation protein C (apc) activity, and apc production by
PT thrombin/thrombomodulin composite, useful for treating sepsis, arterial
PT thrombosis.
XX
PS Disclosure; SEQ ID NO 12; 105pp; Japanese.
XX
CC The invention comprises anti-protein C inhibitor (PCI) antibody. The anti
CC -PCI antibody of the invention is useful for treating or preventing a
CC disease which develops and/or progresses due to reduced activated protein
CC C (aPC) activity. Such diseases include: sepsis, disseminated
CC intravascular coagulation, and arterial thrombosis. The present amino
CC acid sequence represents a mouse anti-protein C inhibitor antibody.

PS Claim 12; SEQ ID NO 5; 151pp; English.
XX
CC The invention relates to an antibody or its antigen-binding fragment,
CC which binds to CS1 (also known as SLAM family member 7, SLAMF7) and
CC inhibits immunoglobulin secretion, where the antibody binds to
CC substantially the same epitope as an antibody comprising an amino acid
CC sequence of any one of SEQ ID NOS: 3-26, the antibody comprises an amino
CC acid sequence of SEQ ID NOS: 27-44, and where the heavy chain variable
CC region comprises a complementarity determining region (CDR) of SEQ ID NO:
CC 33. Also disclosed are (i) a heavy chain CDR of an antibody comprising an
CC amino acid sequence of SEQ ID NOS: 9-11, 15-17, 21-23, 29-33, (ii) a
CC light chain CDR of an antibody comprising an amino acid sequence of SEQ
CC ID NOS: 12-14, 18-20, 24-26, 34-370, (iii) a pharmaceutical composition
CC comprising a pharmaceutical carrier and the antibody described above,
CC (iv) a method of inhibiting proliferation of CS1 expressing cells, (v)
CC inhibiting immunoglobulin secretion, and (vi) increasing antibody-
CC dependent cellular cytotoxicity (ADCC) activity of the antibody described
CC above, where the antibody has decreased levels of fucose or is mutated to
CC increase antibody affinity for a FcgammaR receptor. The antibody of the
CC invention inhibits the proliferation of leukocytes or cancer cells. The
CC antibody triggers cytotoxic effects on cells expressing CS1 or enhances
CC cytotoxicity mediated by immune cells, or triggers ADCC-mediated
CC cytotoxicity of cells expressing CS1. The antibody binds to substantially
CC the same epitope as the antibody produced by a hybridoma cell line having
CC ATCC accession number PTA-5091 or a Luc63 antibody. The antibody is
CC produced by a hybridoma cell line having ATCC accession number PTA-5091
CC or by a hybridoma cell line expressing Luc63 antibody. The antibody is a
CC monoclonal antibody, e.g. a chimeric antibody, a humanized antibody, or a
CC fully human antibody. The antibody is conjugated with a cytotoxic agent.
CC The antibody comprises a heavy chain variable region comprising amino
CC acid sequences of SEQ ID NOS: 3, 5, 7, or 27, and a light chain variable
CC region comprising amino acid sequences of SEQ ID NOS: 4, 6, 8, or 28. The
CC antibody, compositions, and methods are useful for diagnosing, preventing
CC or treating plasma cell cancer, e.g. myeloma, multiple myeloma, myeloma
CC of bone, extramedullary plasmacytoma, macroglobulinemia (including
CC Waldenstrom's macroglobulinemia), heavy-chain disease, primary
CC amyloidosis or monoclonal gammopathy of unknown significance, non-plasma
CC cell cancer (chronic lymphocytic leukemia), autoimmune disorder,
CC inflammatory bowel disease (IBD), or systemic lupus erythematosus (SLE).
CC This sequence represents a CS1 antibody.

PT New cryptic collagen antibody with one or more complementarity
PT determining regions, useful for diagnosing and treating disorders
PT associated with angiogenesis, tumor growth and/or cancer metastasis.
XX
PS Example 1; SEQ ID NO 4; 232pp; English.
XX
CC This invention relates to a novel grafted antibody or its functional
CC fragment comprising one or more complementarity determining regions
CC (CDRs) of a defined light CDR and a heavy CDR with at least one amino
CC acid (aa) substitution where the antibody has specific binding activity
CC for a cryptic collagen epitope. The growth of all solid tumours requires
CC new blood vessel growth, angiogenesis, inhibition of which is an approach
CC to limiting tumour growth. The invention may allow development of
CC therapeutics with a cytostatic activity as a collagen agonist or
CC antagonist. The invention is useful for diagnosing and treating disorders
CC associated with angiogenesis, tumour growth and/or cancer metastasis. The
CC present sequence is the partial amino acid sequence of the mouse anti-
CC cryptic collagen site antibody HUIV26 variable region heavy chain used
CC during the creation of the antibody of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 50
US-08-480-434-30
; Sequence 30, Application US/08480434
; Patent No. 5811248
;  GENERAL INFORMATION:
;    APPLICANT:  Charles C. Ditlow, et al.
;    TITLE OF INVENTION:  ATHEROSCLEROTIC PLAQUE SPECIFIC ANTIGENS,
;    TITLE OF INVENTION:  ANTIBODIES THERETO, AND USES THEREOF
;    NUMBER OF SEQUENCES:  88
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  Pennie & Edmonds
;      STREET:  1155 Avenue of the Americas
;      CITY:  New York
;      STATE:  New York
;      COUNTRY:  U.S.A.
;      ZIP:  10036
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.24
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/08/480,434
;      FILING DATE:  07-JUN-1995
;      CLASSIFICATION:  435
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Albert P. Halluin
;      REGISTRATION NUMBER:  25,227
;      REFERENCE/DOCKET NUMBER:  7606-053
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  (415) 854-3660
;      TELEFAX:  (415) 854-3694
;      TELEX:  66141 PENNIE
;  INFORMATION FOR SEQ ID NO:  30:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  120 amino acids
;      TYPE:  amino acid
;      STRANDEDNESS:  unknown
;      TOPOLOGY:  unknown
;    MOLECULE TYPE:  DNA (genomic)
;    HYPOTHETICAL:  N
;    ANTI-SENSE:  N
